

Pierce Jamieson, Ph.D.

2313 Richton Street, A, Houston 77098, United States, 214-708-7488, jamieson.pierce@gmail.com

PROFILE

My graduate training focused on molecular biology and biochemistry, providing a deep technical foundation in biological mechanisms and experimental rigor. I subsequently worked as a biotech Equity Research Analyst at ARK Investment Management under Cathie Wood, where I evaluated the scientific credibility, translational feasibility, and commercial potential of emerging biotechnology companies. In that role, I integrated primary literature analysis with financial modeling to assess platform risk, competitive differentiation, and long-term value creation. Through close collaboration with scientists, investors, and global partners, I developed a disciplined, cross-functional approach to generating scientific and financial insights.

EDUCATION

Aug 2016 — Dec 2025	Ph.D., Texas A&M University	College Station, TX
	During my PhD, I dissected plant–fungal pathogen receptor biology with a focus on signal transduction, host–pathogen interactions, and metabolite-level readouts, developing strong experimental intuition around biological robustness, stress response, and pathway control. I specialized in HPLC-based analytical workflows to quantify biochemical outputs, troubleshoot complex biological systems, and connect molecular mechanisms to measurable production-relevant phenotypes.	
Aug 2012 — May 2016	B.S. Molecular and Cell Biology, Texas A&M University	College Station, TX

EMPLOYMENT HISTORY

Apr 2022 — Feb 2023	Equity Research Analyst, ARK Investment Management LLC	
	Promoted to analyst following the development of an automated valuation framework designed to assess public pharmaceutical companies based on the risk-adjusted expected value of their clinical and preclinical assets. I architected and maintained probabilistic, asset-level models that incorporated mechanistic biology, clinical trial design, historical attrition rates, and regulatory risk to estimate enterprise value as a function of pipeline progression. Using this platform, I led high-conviction investment theses across therapeutics modalities, informed portfolio construction and position sizing, and engaged directly with management teams and key opinion leaders to validate assumptions and refine risk models, translating complex clinical and biological uncertainty into disciplined, decision-relevant investment insights.	
Dec 2020 — Apr 2022	Equity Research Associate, ARK Investment Management LLC	
	As an associate at ARK, I supported our firms CEO/CIO Cathie Wood and more senior analysts through rigorous scientific and technical diligence across genomics, gene editing, and emerging therapeutic platforms. I conducted primary literature reviews, benchmarked technologies and pipelines, built and maintained financial and valuation models, and synthesized biological mechanisms into structured risk frameworks. In this role, I developed the analytical foundation for investment theses, contributed to management and KOL diligence, and built fluency at the intersection of biology, computation, and capital allocation.	
Nov 2019 — Aug 2021	CTO, Phobos Capital Management	Houston, TX
	Founded and developed a digital asset trading strategy for a small opportunistic hedge fund, growing assets from \$6.5M to \$10.8M in under one year.	

SKILLS

Python	Analytical Chemistry
C#	HPLC
R Studio	Molecular Cloning

Jamieson**, Wenchan Chen, Hongyu Ma and Changjun Chen. **Function of the Mitochondrial Transport Protein BcMtp1 in regulating vegetative development, asexual reproduction, stress response, fungicide sensitivity, and virulence of Botrytis cinerea.** *Disease Model Mechanisms*. 2021.

POSTER PRESENTATIONS

P. Jamieson, L. Shan. A case-study in gene family evolution post-allopolyploidization. American Society of Plant Biologists Southern Section, New Orleans, LA, USA, 03/26/2018

P. Jamieson. The Utility of FPKM versus TPM as RNA-seq Read Count Normalization Metrics. Plant Pathology Annual Poster Symposium, Texas A&M University, College Station, TX, USA, 5/22/2017.

P. Jamieson, L. Shan. A High-Throughput Bioinformatic Approach for Identifying Receptor-Like Proteins in Gossypium spp. ENG-LIFE Poster Symposium, Texas A&M University, College Station, TX, USA, 4/14/2017.

P. Jamieson, M. V. Kolomiets. Effect of Z-3-Hexenal on Mycotoxin Production. Molecular-Environmental Plant Sciences Poster Symposium, Texas A&M University, College Station, TX, USA, 6/5/2015

P. Jamieson, M. V. Kolomiets. Lipid Signalling: Green Leaf Volatiles. BESC Undergraduate Poster Symposium, Texas A&M University, College Station, TX, USA, 5/30/2014

TEACHING EXPERIENCE

Aug 2017 — May 2018	Teaching Assistant “Intro to Plant Pathology” <i>Lectured and guided students (28 students in fall and 39 students in spring) through learning objectives for microbiology lab techniques, principles of plant-microbe interactions, PCR-based plant disease diagnostics, ELISA-based detection of viral proteins, and common host range assays</i>	College Station, TX
---------------------	--	---------------------

AWARDS AND HONORS

May 2017	Plant Pathology Annual Poster Symposium, 2nd place
Apr 2015	Molecular and Environmental Plant Science Poster Symposium, 2nd Place
Apr 2014	BESC Undergraduate Research Poster Symposium, 1st Place
Mar 2014	Research Experience for Undergraduates, National Science Foundation
Mar 2013	Aggie Research Scholars, Team Leader
